Quick Response Sprinkler

UL Guide Number

VNIV

Product Description

Reliable Models GFR and GFR Recessed Sprinklers are Quick Response fusible solder type automatic sprinklers.

These sprinklers have demonstrated response times in laboratory tests which are five times faster than standard response sprinklers.

This quick response enables the Models GFR and GFR Recessed Sprinklers to apply water to a fire much faster than standard response sprinklers of the same temperature rating.

Application

Quick response sprinklers are used in fixed fire protection systems: Wet, Dry, Deluge or Preaction. Care must be exercised that the orifice size, temperature rating, deflector style and sprinkler spacing are in accordance with the latest published standards of the National Fire Protection Association or the approving Authority Having Jurisdiction. Quick response sprinklers are intended for standard area coverage and standard water densities as specified in NFPA 13. Quick response sprinklers and standard response sprinklers should not be intermixed.

Model GFR & GFR Recessed Quick Response Sprinklers

Installation

Quick response sprinklers are intended for standard area coverage and standard water densities as specified in NFPA-13. Quick response sprinklers and standard response sprinklers should not be intermixed.

The Model GFR Recessed Quick Response Sprinkler is to be installed as shown. The Model F1 or F2 Escutcheons illustrated are the only recessed escutcheons to be used with the Model GFR Pendent or Horizontal Sidewall Sprinklers. The use of any other recessed escutcheon will void all approvals as a quick response sprinkler and negate all warranties.

When installing Model GFR Sprinklers, use the Model D Sprinkler Wrench or Model W2 Sprinkler Wrench and when installing Model GFR Recessed Sprinklers and Pendent Intermediate Sprinklers use the Model GFR2 Sprinkler Wrench. Any other type of wrench may cause sprinkler damage.

Maintenance

The Models GFR and GFR Recessed Sprinklers should be inspected and the sprinkler system maintained in accordance with NFPA 25. Do not clean the sprinklers with soap and water, ammonia or any other cleaning fluids. Remove any dust using a soft brush or gentle vacuuming. Remove any sprinkler which has been painted (other than factory applied) or damaged in any way. A stock of spare sprinklers should be maintained to allow quick replacement of damaged or operated sprinklers. Prior to installation, sprinklers should be maintained in the original cartons and packaging until used. This minimizes the potential for damage resulting in improper operation or non-operation.

Ordering Information:

Specify

1. Sprinkler model
2. Sprinkler type
3. Orifice size
4. Temperature rating
5. Sprinkler finish
6. Escutcheon type
7. Escutcheon finish (where applicable)

Note: When Recessed Model GFR/F1 or F2 are ordered, sprinkler and escutcheon are packaged separately.
